

Bring Personalization and Speed to Your Workflow with a Dynamic Spread and Cut Planning Tool

FOR DECADES, THE WORLD'S LEADING APPAREL BRANDS AND MANUFACTURERS HAVE RELIED ON ACCUMARK® SOFTWARE TO SATISFY THEIR MOST DEMANDING PRODUCTION REQUIREMENTS.

ACCUPLAN™ BRINGS A NEW DIMENSION TO OUR INDUSTRY-LEADING SOFTWARE. THIS POWERFUL, EASY-TO-USE SPREAD AND CUT PLANNING TOOL BOOSTS PRODUCTION EFFICIENCIES AND BOTTOM LINE PERFORMANCE BY LEVERAGING EXISTING LIBRARIES AND DATABASES AND AUTOMATING THE MARKER PLANNING PROCESS.

WITH A NEW MODERNIZED INTERFACE, ACCUPLAN OFFERS MORE CONTROL THAN EVER BEFORE. EQUIPPED WITH PERSONALIZED REPORTS, BETTER CALCULATIONS AND NEW FUNCTIONALITIES, ACCUPLAN HELPS YOU GET MORE DONE.

Increase efficiency.

- Powerful digital cut ticket provides all the spreading and marking information to the GERBERcutters.
- Robust database written in SQL Server.
- Uses a powerful Marker Library, a statistical database built from sets of previously made markers.
- Easily switch to cut planning by length or weight, quantifying fabric required in either format.
- Uses AccuNest™ to draft markers on the fly, obtaining estimated length and efficiency information for pre-approvals.
- Combine multiple fabric widths and colorways.
- Improved work order workflow by eliminating the need for external programs such as Excel® sheets.
- Offers matching and pant drops capabilities, as well as a more intelligent cut plan algorithm for specific product and fabric types (e.g. plaids and stripes and men's suits).
- Manage spreads more efficiently by visualizing how spreads are allocated to the cutting tables.
- Easily generate markers when spreading in pairs while easily maintaining piece sharing from cut planning to marker making.

- Seamless communication with other Gerber products: AccuMark and AccuNest.

Improve productivity.

- Import multiple cut work orders from ERP systems, speeding up the process of cut planning containing multiple styles, fabrics and colors, and marker generation.
- Improve fabric consumption with an automatic pre-estimate of best usage for roll leftovers.
- Obtain desired results faster with manual cut plan interaction.
- Get the statistics and data you need with easy configuration and personalized reports.
- Barcodes have been incorporated to marking and spreading instructions to properly communicate with spreaders and cutters.
- Production Tracker Report provides live production status. Allows users to easily plan multiple POs together and report fabric consumption separately. Generate fabric required per material, styles, client and POs or by production plant.
- Export Cut Plan Reports back to ERP.

Use Marker Generator to automatically generate multiple marker bundle combinations.

Maximize time by managing spreads as they are represented on cutting tables.

Communicate instructions effectively with cutters and spreaders through barcodes.

Save time and money.

- Reduces production costs by automating marker planning.
- Easily forecast over/under production based on demand.
- Gain a more accurate picture of fabric consumption with the addition of fabric properties in the cut plan calculation.
- A built-in ROI calculator tool shows that AccuPlan more than pays for itself.
- Merge multiple POs.
- AccuPlan's costing module is easy to set up and run. Costing Reports can be run at any time. No need to recalculate a cut plan solution.
- AccuPlan includes material weight in its final calculations.

Windows® 8, 8.1, 10 hardware requirements:

The system must meet the minimum hardware requirements set by Microsoft® for the operating system and the following:

For use with AccuPlan	Recommended
Processor Speed	Intel® Core™ i7 2400 3.1 GHz or higher
System Type	64-bit OS
Hard Disk Capacity	230+ GB
Memory	16 GB
Service Packs	Current
Graphics Card	Open GL Compatible

Additional requirements:

- A Solid State Drive (SSD).
- SQL is needed for database.
