

HoopMaster is a Revolutionary Tubular Hooping System

Midwest Products has created a hooping system which is simple in design and built to withstand the punishment of a commercial environment. Even the most inexperienced employee will find it easy to use. HoopMaster will have new employees hooping quickly and accurately in no time at all. Your productivity and profitability will increase as well as the quality control your customers deserve. Put this innovative system to work for you. The many time saving and profit building features will quickly pay for themselves.

The Fixture Arms

The arms hold the tubular hoop perfectly square with the work surface and directly over the lower ring. All you have to do is align the shirt and press the hoop down.

Magnetic Backing Material Holder

Eliminates the need to use tape, clips, or messy spray adhesive. The magnetic flaps hold the backing material in place over the lower ring while you hoop the garment.

Number and Letter Grid

The grid is used to document logo placement for repeat orders. For example, when you document that a logo is placed at "D19" all repeat orders will be consistent and easy to set up.

Rim on the Fixture

The raised rim recesses the hoop ring at the correct depth every time. This holds the garment taut while being embroidered.
