SEPTEMBER, 2016 Printed in Japan (TM)

# Creation of "sewing"

Commitment to "seam quality" is poised to enter a new era with JUKI's next-generation sewing system.

The change is driven by digitalization.

Until recently, sewing machines have been adjusted by human operators based on personal hunches and experience.

Now, with JUKI's digital sewing system DDL-9000C, sewing machine adjustments are fully digitalized. The settings can be reproduced with total accuracy to perfectly suit the materials being sewn.

The promotional video is available by reading the QR code.

## Digital functions which accentuate excellent "seam" quality

DDL-9000C Series  
Direct-drive, high-speed, lockstitch sewing system with automatic thread trimmer

Standard | Front Up (reduce material feed) | Rear Up (prevent needle bending) | Box Feed (for multi-layered section)

Front Up

(reduce material feed)

(prevent needle bending)

Box Feed

(for multi-layered section)

Full-digital type

### I. Adoption of the needle-thread active tension

#### Needle tension is digitally controlled

Needle thread tension which matches sewing conditions given can be set on the operation panel and stored in memory. The need thread tension adjustment needs experience. However, for this sewing machine, thread tension data stored in memory is reproducible, thereby reducing the setup time when the product to be sewn is changed. Example: Needle-thread active tension demonstrates its effectiveness in the topstitching process. For wetting shoulders of a difficult-to-sew material, uniform stitches can be produced continuously by appropriately changing the sewing conditions even if the right and left material fabric differ in texture grain.

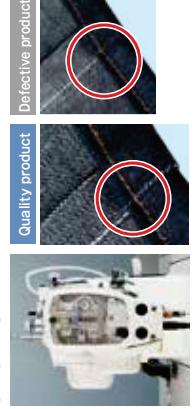

Full-digital type

### II. Active presser foot pressure mechanism

#### The presser foot pressure is digitally controlled

Digital control system controls the presser foot pressure. Under the automatic mode, the multi-layered section detection function detects changes in material thickness to increase/decrease the presser foot pressure accordingly. Under the manual mode, the presser foot pressure control function is assigned to the hand switch to enable operation with the hand switch.

Quality product | Defective product  
The active presser foot pressure mechanism demonstrates its effectiveness in prevention of stitch gathering and loose stitches.

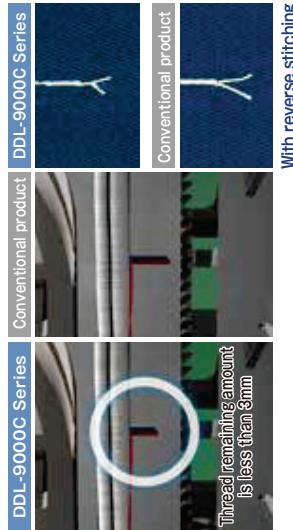

The needle thread tension, presser foot pressure, pitch, feed locus and feed dog height can be totally changed to link their adjustments appropriately.

Full-digital type

### III. Needle thread clamp

The device clamps the needle thread and draws it under the material at the beginning of sewing. The needle thread clamp device works to reduce the size of thread tangling in on the wrong side of the material. This expands the area around the needle entry, thereby allowing the use of various gauge components.

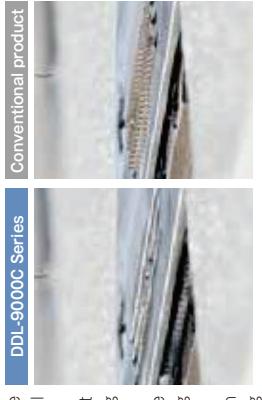

## Remaining thread at the end of sewing reduced to 3 mm

Conventional product | DDL-9000C Series  
Conventional product | DDL-9000C Series  
Conventional product | DDL-9000C Series  
With reverse stitching (Wrong side)

Double-edge driven rotary knife system is adopted. The double edges of the knife intersect with each other directly under the needle entry point to trim the thread. Achievement of thread trimming as short as 3 mm. The grooved cam system is adopted to enable forcible release of the thread trimmer even if the thread trimmer locks. The picker device is also adopted. The picker device secures a sufficient length of needle thread, as well as it stabilizes the length of thread remaining on the material.

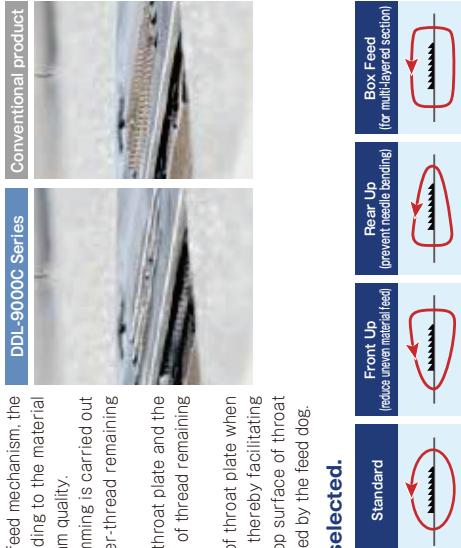

## Vertically- and horizontally-driven digital feed mechanism

DDL-9000C Series | Conventional product

The device clamps the needle thread and draws it under the material at the beginning of sewing. The needle thread clamp device works to reduce the size of thread tangling in on the wrong side of the material. This expands the area around the needle entry, thereby allowing the use of various gauge components.

With reverse stitching (Wrong side)

Thanks to the world's first vertically-driven digital feed mechanism, the feed dog height can be adjusted with ease according to the material fabric of product to be sewn, thereby improving seam quality. Thanks to this digital feed mechanism, thread trimming is carried out with the feed dog lowered in the case the shorter-thread remaining thread trimming function is enabled. As a result, the clearance provided between the throat plate and the material is eliminated, thereby stabilizing the length of thread remaining after thread trimming. The feed dog does not protrude the top surface of throat plate when the sewing machine stops with its needle bar up, thereby facilitating placement/removal of the material on/from the top surface of throat plate and preventing the material from being damaged by the feed dog. Various kinds of feed locus can be selected.

Digitalized vertically- and horizontally-driven feed mechanism allows easy adjustment of settings such as the feed locus only on the operation panel according to the material to be sewn.

Commitment to "seam quality" is poised to enter a new era with JUKI's next-generation sewing system.

## Management of sewing performance and sewing machine by the utilization of IoT (Internet of Things)

### Management, browsing and editing of data can be carried out on the application software

Data on sewing machine adjustments made according to the product to be sewn can be transferred to a commercially-available Android tablet in contactless mode. This enables quick check for uniform settings as well as confirmation of conditions of sewing machines in a sewing line, thereby facilitating setup changes. The operation panel is also provided as standard with a USB port. Data management and software update can be carried out with ease using a USB thumb drive.

Data items of sewing can be numerically managed to ensure "stable quality" and "reduction in time required for setup changes". Quantified sewing data can be externally taken from the sewing machine using an Android tablet or USB thumb drive.

\*\*\*Android OS version 6.0 is recommended to use JUKI Smart App. (Operation is confirmed with respect to Versions 5.0 and later.) Contact JUKI distributor in your area for how to use the application software.

## Digitalized control panel

Two different modes; i.e., the operator mode which prioritizes ease of operation and the serviceperson mode, are prepared to respectively display indications according to the user. In addition, installation of NFC enables data transfer to an Android tablet. Data transferred from the sewing machine to an Android tablet can be edited on the tablet.

### Full Digital Type

Adoption of a 4.3-inch large color liquid crystal touch panel ensures easy operation. The touch panel is provided with JUKI's unique intelligent sewing system features.

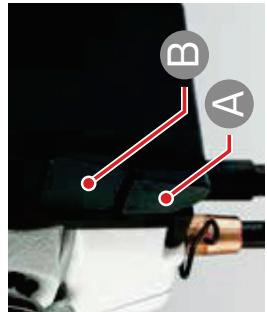

### Digital Type

Adoption of a black-and-white liquid crystal switch panel ensures easy operation. Since, unlike the CP panel, the black-and-white liquid crystal panel provides verbal explanation of its operation, it is easier for the operator to understand how to operate it.

## Functions necessary for sewing machine operation can be used with the hand switch

### Hand switch (in the case it is assigned with the multi-layered section changeover function)

#### Full-digital type

- Detect Multi-layered section of material and automatically carry out the **changeover** of multi-layered section >Automatic mode>
- Manually carry out the **changeover** of multi-layered section at an arbitrary timing with the hand switch <Manual mode>
- Set thread tension, presser foot pressure, pitch, feed locus and feed dog height separately for the normal section and multi-layered section of material
- Digitally control presser foot pressure

#### Digital type

- Manually carry out the **changeover** of multi-layered section at an arbitrary timing with the hand switch
- Set **tension, presser foot pressure, pitch, feed locus and feed dog height** separately for the normal section and multi-layered section of material

## Auto-lifter AK-154 Full-digital type

Newly-developed auto-lifter device comes with a stepping motor. This not only increases the amount of lift of the presser foot from 8.5 mm to 13.5 mm at the maximum but also reduces the operating noise. Thanks to the feature of the world's first top and bottom drive electronic feed mechanism to prevent the feed dog from protruding the top of throat plate, the material can be placed under presser foot and removed from there with ease and is not easily damaged.

※ To lift the presser foot to its maximum amount of lift, it is necessary to set the amount of lift in two stages.  
※ For the full-digital type model, the auto-lifter function is provided as standard.

## Commitment to seam quality "Reverse-feed stitching function by means of the reverse feed lever" is provided as standard.

## LED light

The LED light illuminates the needle entry area in the just-under direction from the right and left sides of the needle bar. In comparison with the single-direction illumination, this LED light helps the operator carry out sewing more easily. Illuminance of the LED light is adjustable in five levels. It can also be used as an auxiliary lamp for working.

**DDL-9000C Series**  
Direct-drive, high-speed, loctitch sewing system  
with automatic thread trimmer

A whole host of optional parts are available  
With the optional parts, the sewing machine produces  
seams that are best-suited to the material for a long time.

## OPTIONS

Non-lubricated hook <b>22890206</b>	Non-rotary bobbin Hook: <b>27003557</b> Bobbin case : <b>27003755</b>
Non-lubricated hook(with a needle guard) <b>22890404</b>	Bobbin : <b>27003805</b>

Non-lubricated hook

The hook is used with the lubrication stopped, thereby preventing oil stains. The non-lubricated hook has a lace made of special plastic, a lace made of special plastic.  
★ The following two parts must be added to enable use of the non-lubricated hook in semi-dry head type machines or minute-quantity lubrication type machines.

Hook driving shaft stop-plug screw : 11079506  
O-ring : R0036080200

Auto-lifter AK-154 (foot-pedal type)

## SPECIFICATIONS

MODEL	DDL-9000C-FMS	DDL-9000C-FSH	DDL-9000C-SMS	DDL-9000C-SSH
Type	Application	Medium-weight	Heavy-weight	Digital Type
Lubrication	Semi-dry	Minute-quantity lubrication	Semi-dry	Heavy-weight
Max. sewing speed	5,000st/min <sup>*1</sup>	4,500st/min <sup>*2</sup>	5,000st/min <sup>*1</sup>	Minute-quantity lubrication
Hand switch	Provided as standard (At the time of shipment: Hand switches are assigned respectively with the touch-based switch function and the one-touch trigger switch function) 5mm			
Max. stitch length	5mm	Double-edge rotary system	30.7mm	35.0mm
Thread trimming method	Needle bar stroke	30.7mm	35.0mm	35.0mm
Feed dog height	0.8mm	1.2mm	0.8mm	1.2mm
Needle thread tension	Active tension			Spring type
Presser foot pressure	Electronic control			Spring type
Lift of the presser foot	By hand: 5.5mm, By knee: 15mm Auto: 1st stage 5.0 mm (*0.1~8.5mm), 2nd stage 8.5 mm (*8.5mm~13.5mm) * Adjustable on the operation panel	DBx1·DBx5(#11)	DBx1·DBx5(#11)	DBx1·DBx5(#21)
Needle <sup>*3</sup>	#9~18(Nm65~110)	#9~18(Nm65~110)	#9~18(Nm65~110)	#20~23(Nm125~160)
Bobbin thread winder	Built in the top of machine head (provided with the bobbin thread retaining plate)			#20~23(Nm125~160)
Lubricating oil	JUKI New Defrix Oil No. 1 or JUKI CORPORATION GENUINE OIL 7 (equivalent to ISO VG7)			
Size of bed	517x178mm (distance from needle to machine arm: 303mm)			
Machine head drive	Compact AC servomotor (400W) that is directly connected to the main shaft (direct-drive system)			
Powder consumption	520VA			
Net weight		Machine head: 40.5kg (with AK-154).		

\*st/min<sup>\*</sup> stands for "Stitches per Minute."  
\*1 Stitch length of 4.00 mm or less: 5,000 st/min; Stitch length of 4.05~5.00 mm: 4,000 st/min  
\*2 Stitch length of 4.00 mm or less: 4,500st/min; Stitch length of 4.05~5.00mm: 4,000st/min  
\*3 Differs on a destination-by-destination basis

## WHEN YOU PLACE ORDERS

Please note when placing orders, that the model name should be written as follows

JUKI ECO PRODUCTS	The DDL-9000C is an eco-friendly product which complies with JUKI ECO PRODUCTS standards for protecting the environment.
● The sewing machine complies with the "Juki Group Green Procurement Guidelines" on the use of hazardous substances, which is stricter than other restrictions, such as those of the RoHS Directive. For details of JUKI ECO PRODUCTS, refer to: <a href="http://www.juki.co.jp/eco_eindex.html">http://www.juki.co.jp/eco_eindex.html</a>	
* The RoHS Directive is an EU Directive limiting the use of 6 hazardous substances.	
The Juki Green Procurement Guidelines is the voluntary established criteria to eliminate not only the aforementioned six substances, but also other ones, which also adversely affect the environment.	

To order, please contact your nearest JUKI distributor.
