

### WATERPROOF FILM

This heat applicable film provides a waterproof seal to seams and on the back of embroideries. Designed to be used on light to medium weight vinyl or polyurethane coated fabrics.

Ideal for raincoats and waterproof jackets, simply iron or heat-press the ST104 film on the reverse of your embroidery to stop water penetrating through needle holes.

Now you can embroider without the worry of water penetration!

### SPECIFICATIONS

- Two layer seam tape applied to waterproof fabrics to provide consistent leak prevention
- Ensure the shiny adhesive side of the tape is face down in contact with the fabric
- Heat press onto dull side, a Teflon or other protective paper sheet is recommended
- Film will remain firm when washing up to 40°C
- 100% Polyurethane
